

AquaPower, natural coloured beauty

In the classical textured finishes such as flamed, bush-hammered, sandblasted, ... often the intense beauty of the colours fade away. With the brand new "AquaPower-unit", the **rough stone finish**, is treated with **water under high pressure** (up to 2000 bar).

"AquaPower" ensures, when selecting a textured finish, the material not only gets a compact rough finish but the **intense colour of the material is brought alive**. Black materials who are finished rough, will keep their original **intense black colour**, without any chemical treatment.

The AquaPower treatment is standard in combination with the flamed and Anciento finish.

The AquaPower as standard finish is also available in Black I, Branco Emilio and Rustenbuild. Ask a sample at your vendor.
