**THE SOFT CHARACTER  
AND VISIBLE FOSSILS  
OF LIMESTONE**

 **limestone**

- ◆ Soft colours
- ◆ Warm appearance
- ◆ Purely natural, perfection through imperfection
- ◆ Unique fossil structures
- ◆ Various finishes possible
- ◆ Very durable
- ◆ Heat-resistant
- ◆ Variety of uses
- ◆ Own quarry for Kilkenny Limestone (Ireland)

## PURELY NATURAL

# Limestone reconciles apparent imperfections with a warm appearance and soft colour palette.

Limestone is a natural stone, meaning geological processes have 'sculpted' this material for centuries. You can also see that because fossils, shells, animals, plants, or corals are woven into the stone. The unique structure of this very natural material is combined with warm shades of white, beige, and grey. This soft character of limestone forms the basis for a smooth integration into any interior style.

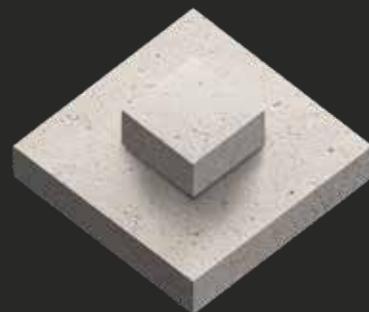

Limestone exists in two categories: soft, porous white stone and a hard variant. French white stone is best known and is often used in dry, sunny climates. The harder version is perfectly at home in a western climate. This variant also adds a warm, Mediterranean touch as an interior floor or interior finishing touch.

Over the years, we at Brachot Surfaces have learned that the traces of nature and small pits in the surface make limestone so characteristic. We continuously deepen our knowledge of limestone in our own bluestone quarry in Ireland (Kilkenny Limestone), but also in other limestone quarries around the world.

As well as being aesthetic, this stone is also a particularly durable material, in the broadest sense of the word. It has a very long lifespan, but is also environmentally friendly. Limestone is only formed by nature, so it doesn't need any energy for its production. CO2 emissions during production and installation are also lower. And because it is 100% recyclable, limestone can be reused for a wide range of applications.

# A selection of our finishes

The finishes shown here are a selection of the 14 finishes offered for limestone. We are also constantly developing new finishes and optimising existing ones at Brachot Surfaces, which means we always find the finish that best suits the material, your tastes, and the style of your home.

## Sensato

This mechanical treatment gives the limestone a soft, satisfying surface texture with a hint of rustic.

## Sawed

Pure, untreated finish as after sawing a block of natural stone. The type of saw determines whether parallel creases or circular strokes are visible..

## Brossato

This finish softens the naturally coarse shape of the stone, emphasising its intense colours.

## Honed

The surface is scoured until a warm, matt shine is obtained. The grain size during scouring determines the final result.

# Opt for soft shades and visible fossils

Limestone is available in a variety of colours, within a palette of beige, grey, and white. These soft tones create a warm appearance.

Traces of geological history, such as fossils of corals or shells, can often be found in the stone. Because of this variation in texture, every slab or tile looks different.

Thanks to its soft, warm tones and structures, limestone fits into any interior style, from rural and rustic to modern and sleek. The various sizes and thicknesses of 2, 3, or 4 cm (and up to 20 cm upon request), 40 materials, and over 14 possible surface finishes, ensure ensure a completely personal touch.

## Variety of uses

Each material has its own specific properties. For more information, please consult the technical data sheet at [www.brachotsurfaces.com](http://www.brachotsurfaces.com).

## Varied appearance

Limestone has been used for many years in a variety of interior and exterior applications: as flooring, wall and façade cladding, kitchen worktops, window sills, or paving. This beautiful material is usually chosen for its aesthetic properties, but just like other types of natural stone, limestone also has an exceptional lifespan. So, it's no coincidence that many old buildings and monuments are built of limestone.

Limestone also acquires a rustic gloss over time. Things are going to look different and more complex over the years.

Limestone has good resistance to high temperatures, but due to its composition, this material is not naturally acid, scratch, or stain-resistant. Nevertheless, by impregnating it and using the right maintenance products, limestone can last for many decades.

# CRAFTING VALUE FOR FUTURE GENERATIONS

Brachot Surfaces is a European producer of high-quality natural stone and composite materials with the brands Unistone (quartz composite), Unimarble (marble composite), Uniceramica (ceramics), and Terrazzo (cementitious slab material). Brachot Surfaces is thus a comprehensive supplier of high-quality slab material for interior and exterior finishing. Brachot Surfaces' success lies in the production of slabs in natural stone and composite materials, technical innovation in materials and finishing, as well as years of expertise. Knowledge and experience in the selection of superior blocks are an indispensable asset in the production of natural stone slabs. This makes Brachot Surfaces the ideal partner for the selection and purchase of blocks of natural stone.
