**QUARTZ COMPOSITE (UNISTONE)
KITCHEN WORKTOPS**

HOW TO KEEP YOURS LOOKING GREAT

HOW CAN I MAINTAIN MY QUARTZ COMPOSITE (UNISTONE) KITCHEN WORKTOPS?

Unistone is a composite of high-quality quartz that has been mixed and pressed with pigmented resins. This very hard and wear-resistant material has low porosity: perfect for kitchen worktops. You can achieve the best long-term results by maintaining your worktop in the right way, which is not difficult or labour intensive.

STEP 1

Use **Lithofin MN Easy-Clean** for daily maintenance. This 2-in-1 product removes greasy surface dirt and nourishes your worktop.

Regular cleaning of your kitchen worktop with this product will make it more resilient and easier to maintain.

STEP 2

If necessary, you can use CIF Cream for stains that are hard to remove. Limescale marks caused by tap water can be removed with **Lithofin KF Ceramic-Clean**.

STEP 3

Clean the kitchen worktop regularly with **Lithofin MN Power-Clean** and then use **Lithofin MN Easy-Clean** again for daily maintenance.

TIPS

- If there are some limescale stains on your kitchen worktop, clean it with **Lithofin KF Ceramic-Clean** every now and then.
- Don't use too much water. A gentle rub with a damp cloth is sufficient.
- Always follow the instructions on the packaging of the maintenance products.

Read the material's technical sheet on www.brachotsurfaces.com.

FREQUENTLY ASKED QUESTIONS

There are some grease stains and fingerprints on my kitchen worktop. How can I get rid of them?

Quartz composite is not porous. Grease and prints therefore sometimes remain visible, especially on dark colours. You can remove these stains periodically with **Lithofin MN Power-Clean**. You can then use **Lithofin MN Easy-Clean** for daily maintenance.

There are some white limescale rings on my kitchen worktop. How can I get rid of them?

Put some **Lithofin KF Ceramic-Clean** on a kitchen sponge and keep rubbing gently until the limescale rings disappear. Never use abrasive materials to achieve the desired result faster, as they may damage the worktop.

There are some small stains or grease smudges on my kitchen worktop. How can I get rid of them?

These are often superficial stains or a superficial layer of a used maintenance product. Normally all you need to do is clean the entire surface thoroughly with **Lithofin MN Power-Clean** and rinse.
